Why we need chatbots?

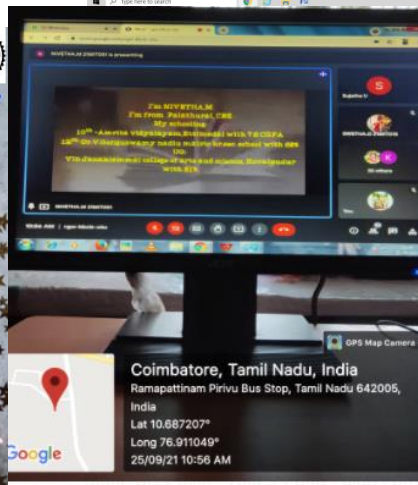

The significant reason for adopting chatbots is because they make the business more efficient and improves the customer experience

- Can handle several hundred (no limit) queries/customers at same time
- Not possible to engage so many human resources for support
- Available 24 / 7
- No need to retrain with tech skill and domain knowledge and get replacement as we would do for human resources
- Higher customer satisfaction : Faster response, Availability

Chatbots are no more an Exciting Requirement : It is now expected requirement

All existing products and new products planned to Build getting Chatbot embedded. Ex : Slack → Slackbot, Web Chatbot, etc.

COMBINATIONAL CIRCUITS

- ✓ Combinational circuit is a circuit in which combines the different gates in the circuit.
- ✓ The order in which the inputs are applied is not important.
- ✓ Example: encoder, decoder, multiplexer and demultiplexer

Characteristics of combinational circuits

- ✓ The output of combinational circuit at any instant of time, depends only on the levels present at input terminals.
- ✓ The combinational circuit do not use any memory.
- ✓ The previous state of input does not have any effect on the present state of the circuit.
- ✓ A combinational circuit can have an n number of inputs and m number of outputs.

9) The monthly income of A and B is in the ratio of 4 : 3 and their monthly expenditure is in the ratio of 3 : 2. If each of them saves Rs.6000 per month, the income of B is

Solution:

- Let Monthly income of A = $4x$
- And, Monthly income of B = $3x$
- Also, Monthly expenditure of A = $3y$
- And, Monthly expenditure of B = $2y$
- Since the both save Rs.6000 each per month,
- Therefore, $4x - 3y = 6000$
- Also, $3x - 2y = 6000$
- By solving the equations, we get,
- $x = 6000$ and $y = 6000$
- \Rightarrow Monthly income of B = $3x = 3 \times 6000 = \text{Rs.}18000$

The Importance of Due Diligence Investigations in the Indian Context: A Global Lesson from Failed Mergers and Acquisitions

The due diligence is carried out in accordance with the purchasing firm's concepts and goals. Due diligence is the process of thoroughly investigating a company or investment opportunity to ensure customer confidence. Despite the quantity of data and the relative ease of requesting information, due diligence failures continue to affect organizations. After reviewing the basics of due diligence, it's best to move on to the next phase.

INTRODUCTION

Mergers and acquisitions are examples of inorganic growth. While mergers are defined as the consolidation of two parties into a single entity, acquisitions are defined as circumstances in which one player acquires the other in order to merge the acquired firm with it. It can take the form of a merger, in which one business acquires another, or a management buyout, in which management acquires the business from its owners. Additionally, de-mergers, i.e., the division of a single business into two or more companies, must be recognised and treated on an equal footing with mergers

and acquisitions, as proposed below, and so references to mergers and acquisitions below are intended to encompass de-mergers as well (with the law & Rules as framed duly catering to the same)¹.

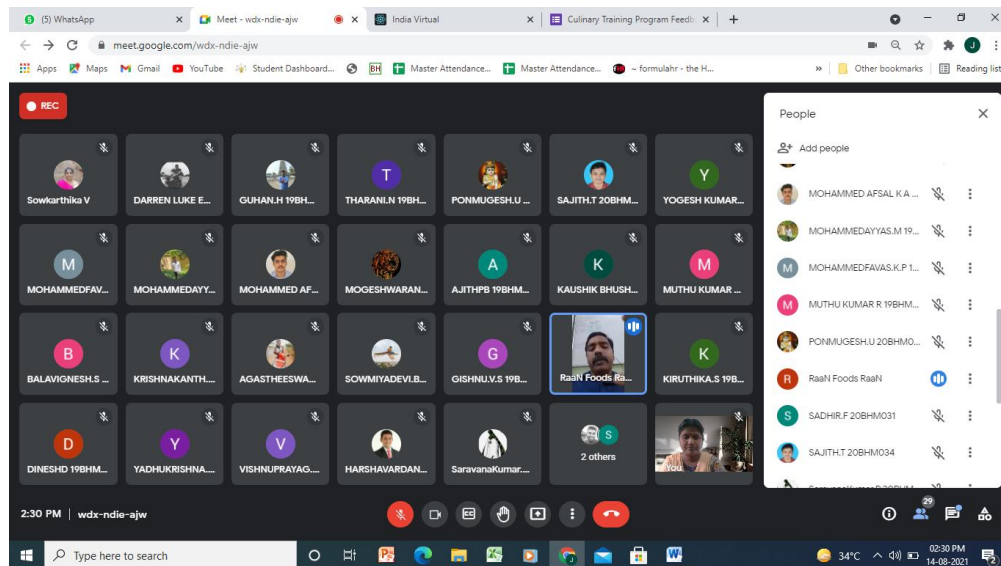

The due diligence examination is conducted in accordance with the acquiring firm's specified concepts and objectives. Due diligence is the process of thoroughly researching a company or an investment opportunity in order to give customers confidence in the product they are purchasing. It is the process of evaluating a company or individual prior to entering into a contract. Mergers and Acquisitions (M&A) have become a common form of corporate restructuring around the world. Cross-border mergers and acquisitions, especially by transnational businesses (TNCs), have become a substantial part of the M&A process. Market-driven M&A is mostly a phenomenon of the late 1990s in the Indian sector. Early M&A in India was facilitated by government agencies or financial institutions operating inside a controlled environment. Since 1991, however, Indian companies have become increasingly vulnerable to both domestic and international competition, and survival has become a necessity. As a result, firms have begun to restructure their operations around their core business activities through M&A in recent years.²

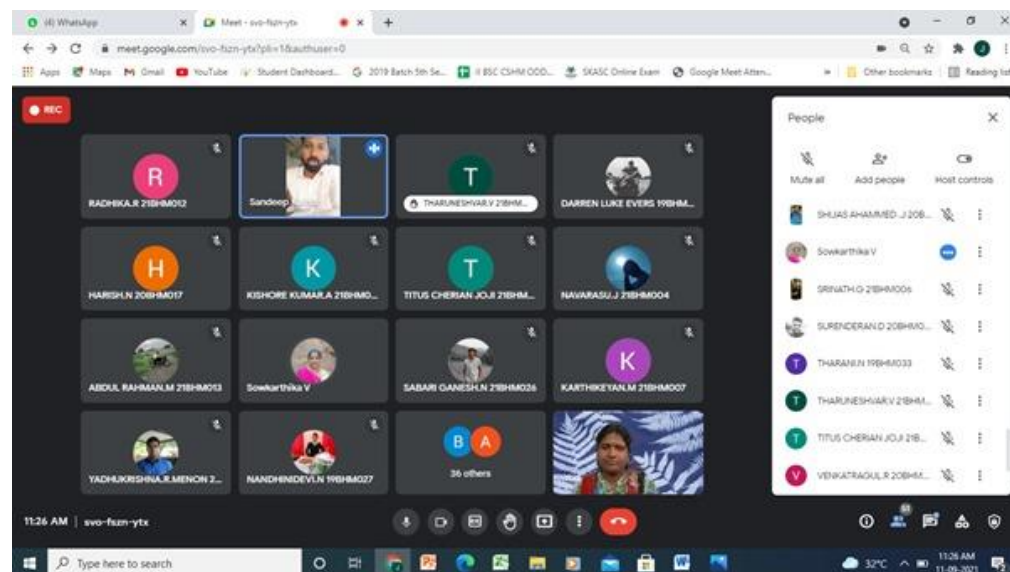

Due diligence is required for mergers and acquisitions. Due diligence allows the buyer to check key information about the seller, such as contracts, finances, and customers, during the mergers and acquisitions process. After gathering this information, the consumer is in a better position to make an informed decision and complete the purchase with confidence. Before due diligence can begin, the letter of intent must be signed (LOI). Due diligence is usually included in the purchase of a company and entails a thorough understanding of the firm's obligations, such as liabilities and lease agreements. The firm employs a variety of procedures while conducting financial due diligence, including conducting interviews and talks with key personnel and senior management, document checks, comparing various historical financial data, trend analysis, and reporting on financial issues and tax risks. Additionally, financial due diligence service providers investigate the current state of the target firm's activities in order to offer this information to the firm responsible for acquiring them. The key to a successful merger or acquisition is to properly combine staff engagement
